Sequence 4166, Application US/09583110

Patent No. 6699703

GENERAL INFORMATION:

PAPPLICANT: Lynn Doucette-Stamm et al.

TITLE OF INVENTION: Nucleic Acid and Amino Acid Sequences Relating to Streptococcus;

TITLE OF INVENTION: Pneumoniae for Diagnostics and Therapeutics

TITLE OF INVENTION: Pneumoniae for Diagnostics and Therapeutics

FILE REPERBENGE: PATHOD-07A

CURRENT PAPLICATION NUMBER: US/09/583,110

PRIOR FILING DATE: 1998-06-26

PRIOR FILING DATE: 1998-06-12

PRIOR FILING DATE: 1998-06-12

PRIOR FILING DATE: 1998-05-12

PRIOR FILING DATE: 1998-05-12

PRIOR FILING DATE: 1998-07-02

NUMBER OF SEQ ID NOS: 5322

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ð
Sequence 10, Application US/09233989

Patent No. 6248527

GENERAL INFORMATION:

APPLICANT: Chen, Hong

APPLICANT: Chen, Hong

TITLE OF INVENTION: Method of Detecting Risk of Type II Diabetes Based on

TITLE OF INVENTION: Mutations Found in Carboxypeptidase E

TITLE OF INVENTION: Mutations Found in Carboxypeptidase E

FILE REFERENCE: 5800-14, 035800/1433, 989

CURRENT APPLICATION NUMBER: 06/10/233, 989

CURRENT APPLICATION NUMBER: 60/105,102

EARLIER FILING DATE: 1999-10-21

NUMBER OF SEQ ID NOS: 10

SEQ ID NO 10

SEQ ID NO 10

LENGTH: 641
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 7, Application US/09538092;

Sequence 50573, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT HOmburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster.

FILE REFERENCE: File Reference: 7326-094

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SEQ ID NO 50573

LENGTH: 145
                                                                                                                                                                                                                                ABPLICANT Homburger et al.

Sequence 6023, Application US/09328352

Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: BAUMANNI FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION WUMBER: US/09/326,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ·;
APPLICANT: Lynn Doucette-Stamm et al TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS FILLE REFERENCE: 032796-032 CURRENT REPELSANCE: 032796-03.

Distelet-derived growth factor receptor alpha - zebra fish (fragment)
N;Contains: protein-tyrosine kinase (EC 2.7.1.112)
C;Species: Barchydanio rerio (zebra fish)
C;Date: 13-Jan-1995 #sequence_revision 07-Feb-1997 #text_change 09-Jul-2004

Submitted Methanococus maripaludis.",
-!- FUNCTION: Part of the FMC diamp loader complex which loads the PCNA sliding clamp onto DNA (By similarity).
-!- FUNUTI: Heterowultimer composed of small subunits (rfcS) and
large subunits (rfcL) (By similarity).
-!- SIMILARITY: Belongs to the activator I small subunits family. RfcL

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANN.

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107166-132
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT FILING DATE: 1999-02-12
PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-02-13
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 26505
LENGTH: 94
                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Sequence 30311, Application US/09252991A

Sequence 20311, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT:
MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLBIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PLILING DATE: 1998-02-18
PRIOR PELLING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 30911

LENGTH: 436
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ij

Patent NO. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARRUGINGA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ARRUGINGA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT PAPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PLING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 248

US-05-252-914A-3093

Sequence 30903, Application US/09252991A

Patent No. 655179

Patent No. 655179

Patent No. 655179

Patent No. 655179

TILLS OF INVENTION: WUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TILLE OF INVENTION: WUCLEIC ACID AND THERAPEUTICS

TILLE OF INVENTION: WUCLEIC ACID AND THERAPEUTICS

TILLE OF INVENTION: WUMBER: US/09/25,991A

CURRENT FILING DATE: 1998-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR PILING DATE: 1998-07-27

WUMBER OF SEQ ID NOS: 33142

LENGTH: 173

LENGTH: 173

CRGANISM: Pseudomonas aeruginosa

US-09-252-991A-30903
              GENERAL INFORMATION:
APPLICANT: SMITH, DOUGLAS
APPLICANT: MAO, JEN-I
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES
TITLE OF INVENTION: RELATING TO MYCOBACTERIUM TUBERCULOSIS AND LAPRAE FOR
TITLE OF INVENTION: DIANNOSTICS AND THERAPEUTICS
NUMBER OF SEQUENCES: 411
CORRESPONDENCE ADDRESS:
ADDRESSEE WOLF, GREENFIELD & SACKS, P.C.
STREET: 600 ATLANTIC AVENUE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   о

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 Sahr K.E., Andrabi S., Peters L.L., Chishti A.H.; "Cloning and characterization of the cDNA and gene encoding the mouse mu-calpain large subunit procesin."; submitted (AUG-1998) to the EMBL/GenBank/DDBJ databases.
 and mouse cDNA sequences.";

1. Co. Natl. Acad. Sci. U.5A. 99:16899-16903(2002).

1. FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction.

1. CATALYTIC ACTIVITY: Broad endopeptidase specificity.

1. COFACTOR: Binds 3 calcium ions (By similarity).

1. ENZYMER REGULATION: Activated by micromolar concentrations of calcium and inhibited by calpastatin.

1. SUBUNIT: Forms a heterodimer with a small (regulatory) subunit
 -!- SUBCELLULAR LOCATION: Cytoplasmic; Translocates to the plasma membrane upon Ca(2+) binding (By similarity).
-!- TISSUE SPECIFICITY: Ubiquitous.
-!- SIMILARITY: Belongs to opeptidase family C2.
-!- SIMILARITY: Contains 1 capala catalytic domain.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the Buropean Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
 -I- FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction.
-!- CATALYTIC ACTIVITY: Broad endopeptidase specificity.
-!- COFACTOR: Binds 3 calcium ions (By similarity).
-!- BNZNMR REGULATION: Activated by micromolar concentrations of calcium and inhibited by calpastatin.
-!- SUBENIT: Forms a heterodimer with a small (regulatory) subunit
 -! SUBCELLUIAR LOCATION: Cytoplasmic; Translocates to the plasma membrane upon Ca(2+) binding (By similarity).
- TISSUE SPECIFICITY: Ubjultous.
-! SIMILARITY: Belongs to peptidase family C2.
-! SIMILARITY: Contains 2 EF-hand calcium-binding domains.

GENERAL INFORMATION:
APPLICANT: Scanlan, Matthew J.
APPLICANT: Scanlan, Matthew J.
APPLICANT: Stockert, Elisabeth
APPLICANT: Chen, Yao-Tesng
TITLE OF INVENTION: Colon Cancer Antigen Panel
FILE REFERENCE: L0461/7105 (JRV)
CURRENT APPLICATION NUMBER: US/09/649, 602
URRENT FILING DATE: 2001-05-04
NUMBER OF SEQ ID NOS: 30
SOFTWARE: Patentin version 3.0
SEQ ID NO 19
LENGTH: 890
 Query Match
38.5%; Score 50.5; Dest Local Similarity 50.0%; Pred. No. 23;
Matches 11; Conservative 5; Mismatches
 Sequence 19, Application US/09849602
Patent No. 6794501
 TYPE: PRT
CAGANISM: Homo sapiens

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 spleen and heart.

DevELOOPMENTAL STAGE: Found diffusely on the lateral membranes of Sertoli calls in the early prepubertal period. With development, became gradually concentrated at the most basal regions of Sertoli
 -!- DOMAIN: The C-terminal is cytoplasmic and is important for interaction with ZO-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).
-!- PTM: Phosphorylated (By similarity).
-!- SIMILARITY: Belongs to the ELL / occludin family.

"Possible involvement of phosphorylation of occludin in tight junction
 Gaps
 J. Cell Biol. 137:1393-1401(1997).
-!- FUNCTION: May play a role in the formation and regulation of the tight junction (TJ) paracellular permeability barrier. Interacts with ZO-1.
 -!- SUBUNIT: Interacts with VAPA (By similarity).
-!- SUBCRIVILAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Localized at tight junctions of both epithelial and endothelial cells.
-!- DOMAIN: The C-terminal is cytoplasmic and is important for interaction with Zo-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).
-!- PTM: Phosphorylated. Less-phosphorylated forms are found in basolateral membrane, cytosol and tight junction. More-heavily phosphorylated forms are concentrated exclusively in tight

Cocladin dephosphorylation in sarly development of Xenopus laevis.";
Cocludin dephosphorylation in sarly development of Xenopus laevis.";
U. Cell Sci. 110:313-3133(1997).

I. Cell Sci. 110:313-3133(1997).

I. FUNCTION: Probably plays a role in the formation and regulation of the tight junction (TJ) paracellular permeability barrier.

C. I. SUBUNIT: Interacts in vitro with cingulin, possibly directly.

Interacts with Zo-1 (By similarity).

C. I. SUBCELLULAR LOCATION: Integral membrane protein.

C. I. SUBCELLULAR LOCATION: Integral membrane protein.

C. I. TISSUE SPECIFICITY: Localized at tight junctions of both granules in the peripheral cells.

C. I. DEVELOPMENTAL STAGE: A maternally synthesized protein. Found in granules in the peripheral cytoplasm in the fertilized egg, it cocalizes first to the basolateral membrane, then to tight junctions after cingulin and ZO-1. Nascent tight junctions are in played by the two-cell stage. The maternal form is more highly phosphorylated than the form detected in later developmental
